

Magnesium Oxide Board

Magnesium oxide board "MgO board" is made of magnesium oxide, a type of mineral cement, magnesium chloride and some fibrous reinforcement. No energy is consumed during the manufacturing process and it contains no solvents, oils, asbestos or toxins. MgO is a type of sheathing board, like drywall or cement board but with improved characteristics such as fire resistance, weatherability, strength, resistance to mold and mildew, and UL approved.

MgO is available in various thicknesses and sheet sizes. It is very smooth on one side and sand textured on the other and the color ranges from light tan to cream. MgO is easily cut for shapes and accepts any type of paint, direct printing and tiling making it one of the most durable and flexible eco materials for today's signage and displays. MgO materials can be used alone or integrated into most of VGS' proprietary signage and fixture systems to create an attractive eco-friendly program.

Reusable Signs and Displays

Extend the lifecycle of your signage and displays with our exclusive MagaLens® system. Simply lift the durable Lexan® cover and install your printed graphic inserts in seconds. Designed for the digital age, VGS fixtures use plain paper inserts you can generate from conventional laser and inkjet printers. And with our Sign-O-Matic™ software, you can design and print your own inserts like a professional!
