

Reinvention

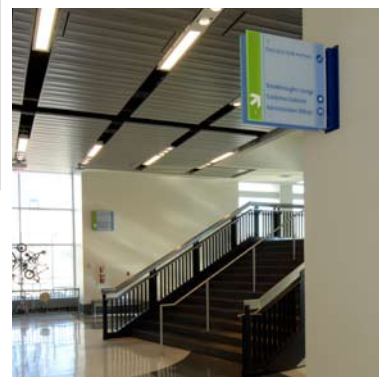

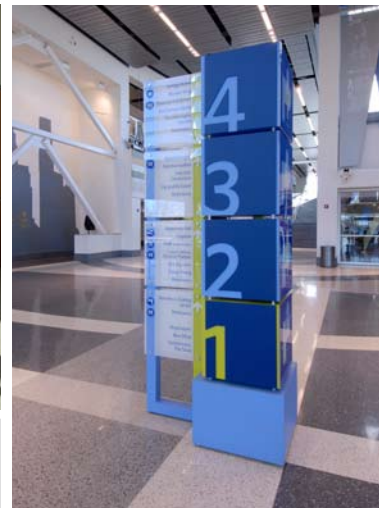

In 1993, when the Liberty Science Center in Jersey City, New Jersey first opened, VGS created all the interior signage including large murals, freestanding stanchions, interactive kiosks, donor wall and oversized fiberglass forms. So, when they were ready to reinvent themselves, Liberty Science Center relied on a trusted partner for their signage and wayfinding system.

10 years in the planning, \$109 million in public and private funds and nearly double the building size, VGS brought Liberty Science Center's signage design to life. They fabricated and installed a cohesive interior wayfinding system consisting of oversized vinyl graphics, updateable reception signage, fabricated monitor surrounds with digitally printed graphics, 6 - 8 ft freestanding directories/directionals and multi-dimensional wall, flag and overhead directional signage with unique side mount detail.

While renowned for its innovation and manufacturing expertise, VGS prides itself on developing true partnerships with their clients. Liberty Science Center is a perfect example of the many valued, long-lasting relationships that VGS has cultivated over the years.
